TREATNET works with a variety of partners in participating countries worldwide.

National and regional networks support the implementation of the strategy and include:
- Governments
- Specialized services for drug dependence treatment and care
- Primary health care services
- Academic institutions
- Municipalities
- Civil society organizations
- United Nations agencies and regional organizations

TREATNET is active in five regions:

**SOUTH AFRICA AND MIDDLE EAST**
- Egypt
- Jordan
- Lebanon
- Morocco
- United Arab Emirates

**CENTRAL ASIA**
- Afghanistan
- Kazakhstan
- Kyrgyzstan
- Tajikistan
- Turkmenistan
- Uzbekistan

**LATIN AMERICA**
- Brazil
- Colombia
- Haiti
- Nicaragua
- Peru

**AFRICA**
- Côte d'Ivoire
- Kenya
- Mozambique
- Nigeria
- Sierra Leone
- Tanzania, United Rep. of
- Zambia

**SOUTH-EAST ASIA**
- Cambodia
- Myanmar
- Viet Nam

TREATNET is closely linked to the UNODC-WHO Joint Programme on Drug Dependence Treatment and Care.

TREATNET wishes to thank the following donors for their generous support:
- Canada
- Spain
- Sweden
- United States
- OFID

**Vision**
A wide range of health and social services for all those whose lives are impaired by drug dependence

**Mission**
Working together for universal access to evidence-based, comprehensive and ethical drug dependence treatment and care
The World Drug Report (UNODC 2009) estimates the total number of people using illicit drugs at upwards of 250 million people—equivalent to about 4 per cent of the global population aged 15 to 64. Of that number, as many as 38 million people are drug dependent, but only about 4.9 million of them receive evidence-based drug dependence treatment and care.

- Drug dependence is a complex and multifactorial disorder involving individual, cultural, biological, social, and environmental factors.
- Drug dependence is as much a disorder of the brain as any other neurological or psychiatric illness.
- Drug dependence is a treatable health disorder.
- Drug dependence treatment needs a comprehensive, multidisciplinary approach including both pharmacological and psychosocial interventions.
- Drug dependence can be treated effectively with low-cost medications and standardized psychological therapies.

Commitment to health-centred and community-based drug dependence treatment

UNODC has launched a new strategy for the treatment of drug dependence to promote and support evidence-based and ethical treatment policies worldwide.

TREATNET promotes diversified and accessible quality drug dependence treatment and care services, including HIV/AIDS prevention and care. TREATNET began in 2005 with 20 treatment centres worldwide, and in its current phase is being implemented in 27 countries in five regions.

The goals:
- Increase access to quality drug dependence treatment services
- Reduce the negative health and social consequences of drug use and dependence
- Ensure local ownership and sustainability by involving staff from national and local government agencies, universities and treatment centres in project countries

Strategy:
- Advocacy: Raising awareness of drug dependence as a health disorder that requires a multidisciplinary and comprehensive approach
- Capacity building: Provide training on evidence-based drug dependence treatment for health and social service providers, based on the UNODC TREATNET Training Package (Training of Trainers approach)
- Service improvement: Create community-based treatment networks involving health and social services

Knowledge transfer through evidence-based training

Knowledge transfer through evidence-based training

Commitment to health-centred and community-based drug dependence treatment

Drug dependence is considered a multifactorial health disorder that often follows the course of a relapsing and remitting chronic disease. In many societies drug dependence is not yet recognized as a health problem and a substantial proportion of people suffering from it are stigmatized and have no access to treatment and care.

TREATNET is committed to the following principles for the treatment of drug dependence:
- Availability and accessibility of drug dependence treatment services
- Individually-tailored treatment: responsiveness to multiple needs
- Evidence-informed drug dependence treatment
- Framework that protects patient rights and dignity
- Culural and social relevance for different patient groups
- Coordination between health and criminal justice systems
- Patient and community involvement
- Sound management of treatment services
- Strategic planning of treatment systems

The Facts

TREAT is a new initiative to promote and support evidence-based and ethical treatment policies worldwide.

The TREATNET Training Package (Training of Trainers approach) covers community-based treatment networks involving health and social services.
The World Drug Report (UNODC 2009) estimates the total number of people using illicit drugs at upwards of 250 million people—equivalent to about 4 per cent of the global population aged 15 to 64. Of that number, as many as 38 million people are drug dependent, but only about 4.9 million of them receive evidence-based drug dependence treatment and care.

- Drug dependence is a complex and multifactorial disorder involving individual, cultural, biological, social and environmental factors.
- Drug dependence is so much a disorder of the brain as any other neurological or psychiatric illness.
- The main barriers to treatment and care are the stigma and discrimination associated with this treatable health disorder.
- Drug dependence treatment needs a comprehensive, multidisciplinary approach including both pharmacological and psychosocial interventions.
- Drug dependence can be treated effectively with low-cost medications and standardized psychological therapies.
