Approaches to Prevention

Promote the well-being of people and encourage pro-social behavior through social, economic, health and educational measures, with a particular emphasis on children and youth, and focus on the risk and protective factors associated with crime and victimization (prevention through social development);

Change the conditions in neighborhoods that influence offending, victimization and the insecurity that results from crime by building on the initiatives, expertise and commitment of community members (locally based crime prevention);

Prevent the occurrence of crimes by reducing opportunities, increasing risks of being apprehended and minimizing benefits, including through environmental design, and by providing assistance and information to potential and actual victims (situational crime prevention);

Prevent recidivism by assisting in the social reintegration of offenders and other preventive mechanisms (reintegration programmes).
