

Expert consultation on the improvement of drug statistics and to strengthen the Annual Report Questionnaire (ARQ)

UNODC Concept Note

6 June, 2017

Background

Strengthening the production, collection, dissemination and analysis of accurate, reliable and comparable statistical data on drugs is a crucial element in the overall strategy to address the drug problem. This need has been reiterated in a number of resolutions and documents by the General Assembly, ECOSOC and the Commission on Narcotics Drugs (CND). More recently, the outcome document of the thirtieth special session of the General Assembly in April 2016 highlighted the value of reliable, comparable, objective and quality statistics across all drug domains and it also indicated a number of new areas where there is a need to strengthen relevant statistics to improve understanding of emerging challenges (see list in the annex).

In March 2017, at its 48th session, the United Nations Statistical Commission (UNSC) examined a comprehensive International Roadmap to improve statistics on drugs (the Roadmap) and "...having reviewed and recognised the statistical merits of the roadmap, commended it for the consideration of the CND to ensure harmonization with the policy directions of the CND; and in this regard, encouraged collaboration between the Statistical Commission and the Commission on Narcotic Drugs". (See UNSC Report on the 48th session, E/2017/24-E/CN.3/2017/35)

Furthermore, at the 60th session in March 2017, the CND adopted resolution 60/1, highlighting the importance of strengthening the capacity to develop reporting mechanisms, including by identifying gaps in the current drug statistics and by exploring possibilities to strengthen existing data collection and analysis tools at the national level. In addition, the CND invited UNODC, in close cooperation with Member States, to reflect on possibilities to strengthen and streamline its existing data-collection and analysis tools, including improving the quality and effectiveness of the annual report questionnaire.

Against this backdrop, an Expert Consultation will be organized by UNODC – subject to funding availability - as first step to reflect on ways to improve the Annual Report Questionnaire (ARQ) and to discuss activities to support countries in the production of drug relevant statistics, as for example indicated by the Roadmap.

Objective

The Expert Consultation is scheduled to take place in Vienna¹ during the fourth quarter of 2017 - prior to the reconvened session of CND – and it will focus on two areas:

1. ARQ revision. The meeting will discuss options to improve the current ARQ with respect to content and data collection process. In particular the meeting will: i) review data availability, quality and use as emerging from the analysis of multi-year data collection, utilization and dissemination and discuss possible modifications which could improve accuracy and comparability of data reported through the ARQ; ii) analyze the ARQ data collection process to identify possible improvements at national and global level; and iii) discuss how the requests included in the UNGASS Outcome Document for new data and statistics can be best reflected in the ARQ .
2. Capacity building. The meeting will discuss priorities in terms of activities and outputs needed to strengthen drug national data systems particularly in terms of capacity building and methodological development considering also ways to strengthen national and international partnerships.

A technical assessment of the ARQ will be conducted by UNODC prior to the Expert Consultation and presented thereto.

Participants of the expert consultation will include national experts from drug-related institutions who collect and analyze drug statistics (for example persons who fill out the ARQ and/or from national observatories), experts working in National Statistical Offices, experts responsible for drug related data working in international and multi-national organizations, and academics with expertise in the measurement and analysis of the drug problem. Efforts will be made to ensure a balanced participation of demand and supply experts together with experts from other topics related to the drug problem as emerged from the UNGASS outcome document (for example organized crime, illicit financial flows, the darknet).

The main outcome of the consultation will be a report to be submitted to the CND as a conference room paper to inform the Commission on the issues that the experts will have identified as crucial for improving the quality and availability of drug statistics.

¹ Vienna as venue is subject to availability of suitable meeting room at UN Office in Vienna.

UNODC activities for the organization of the Expert Consultation

In order to organize the expert consultation and prepare the relevant background documentation, UNODC will undertake the following activities:

1. Conduct a technical assessment of ARQ in terms of availability, quality and use of its data and information. It will review the ARQ data collection and reporting processes (both at national level and within UNODC) to enhance its effectiveness and quality and prepare a proposal on statistical themes and qualitative information that address the information needs identified by the UNGASS Outcome Document;
2. Organize the Expert Consultation with experts from national institutions (from drug-related agencies/ministries and/or national statistical offices), - including those who have experience in collecting and reporting ARQ in their countries - representatives of relevant regional and international organisations and other scientific experts with expertise in the measurement and analysis of the drug problem
3. Present a conference room paper to the meeting of the reconvened Commission of Narcotic Drugs for its consideration (December 2017)
4. Present the same conference room paper to the 49th Session of UN Statistical Commission (March 2018) as follow up to the discussion that took place at its 48th Session

Annex: Extracts promoting data collection in areas not covered by the Annual Report Questionnaire from the outcome document of the Thirtieth Special Session of the United Nations General Assembly²

Promote and improve the systematic collection of information and gathering of evidence as well as the sharing, at the national and international levels, of reliable and comparable data on drug use and epidemiology, including on social, economic and other risk factors, and promote, as appropriate, through the Commission on Narcotic Drugs and the World Health Assembly, the use of internationally recognized standards, such as the International Standards on Drug Use Prevention, and the exchange of best practices, to formulate effective drug use prevention strategies and programmes in cooperation with the United Nations Office on Drugs and Crime, the World Health Organization and other relevant United Nations entities;

Promote data collection, research and the sharing of information, as well as the exchange of best practices on preventing and countering drug-related crime and on drug supply reduction measures and practices, in order to enhance the effectiveness of criminal justice responses, within the framework of applicable law; illicit trafficking

Respond to the serious challenges posed by the increasing links between drug trafficking, corruption and other forms of organized crime, including trafficking in persons, trafficking in firearms, cybercrime and money-laundering, and, in some cases, terrorism, including money-laundering in connection with the financing of terrorism, by using an integrated, multidisciplinary approach, such as through promoting and supporting reliable data collection, research and, as appropriate, intelligence- and analysis-sharing to ensure effective policymaking and interventions;

Improve the availability and quality of statistical information and analysis of illicit drug cultivation, production and manufacturing, drug trafficking, money-laundering and illicit financial flows, including for appropriate reflection in reports of the United Nations Office on Drugs and Crime and the International Narcotics Control Board, in order to better measure and evaluate the impact of such crimes and to further enhance the effectiveness of criminal justice responses in that regard.

Continue to identify and monitor trends in the composition, production, prevalence and distribution of new psychoactive substances, as well as patterns of use and adverse consequences, and assess the risks to health and safety of individuals and society as a whole and the potential uses of new psychoactive substances for medical
