\(^{(a)}\) Includes substances believed to be ecstasy (e.g. MDMA, MDA, MDE) which may not have been confirmed by forensic testing.

\(^{(b)}\) This quantity reflects the bulk weight of seizures, with no adjustment for purity. Seizures reported by volume (litres, millilitres, etc.) are converted to kg equivalents by assuming a weight of 1 kg per litre. Seizures of amphetamines-group substances reported in tablets or similar units are converted using assumed bulk tablet weights between 90mg and 300 mg, depending on the region and specific drug type, and based on information currently available to UNODC.

Further details on conversion factors are given in the methodology section accompanying the World Drug Report.

**SEIZURES OF ECSTASY-TYPE SUBSTANCES\(^{(a)}\) as percentage of world total and in kg equivalents \(^{(b)}\) - HIGHEST RANKING COUNTRIES - 2014**

- Australia (47%)
- Turkey (10%)
- Myanmar (8%)
- United States of America (6%)
- Netherlands (4%)
- United Kingdom (3%)
- France (3%)
- Brazil (3%)
- Germany (2%)
- Argentina (2%)
- Spain (2%)
- Bulgaria (2%)
- Indonesia (2%)
- Malaysia (1%)
- Romania (0.9%)
- Ireland (0.9%)
- Poland (0.7%)
- China (0.5%)
- Serbia (0.4%)
- Greece (0.4%)
- Finland (0.4%)
- New Zealand (0.4%)

\(^{(a)}\) Includes substances believed to be ecstasy (e.g. MDMA, MDA, MDE) which may not have been confirmed by forensic testing.

\(^{(b)}\) This quantity reflects the bulk weight of seizures, with no adjustment for purity. **SEIZURES OF ECSTASY-TYPE SUBSTANCES BY REGION - as percentage of world total and in kg equivalents \(^{(a)}\) - 2014**

- Oceania (47%)
- Western & Central Europe (17%)
- South-Eastern Europe (13%)
- East and South-East Asia (11%)
- Northern America (6%)
- South America (5%)
- Eastern Europe (0.17%)
- Caribbean (0.08%)
- Near and Middle East /South-West Asia (0.04%)
- Northern Africa (0.028%)
- Central Asia and Transcaucasan countries (0.0094%)
- South Asia (0.0042%)

\(^{(a)}\) Financial year 2013/14.
* Includes substances believed to be ecstasy (e.g. MDMA, MDA, MDE) which may not have been confirmed by forensic testing.

** This quantity reflects the bulk weight of seizures, with no adjustment for purity. Seizures reported by volume (litres, millilitres, etc.) are converted to kg equivalents by assuming a weight of 1 kg per litre. Seizures of amphetamines-group substances reported in tablets or similar units are converted using assumed bulk tablet weights between 90mg and 300 mg, depending on the region and specific drug type, and based on information currently available to UNODC. Further details on conversion factors are given in the methodology section accompanying the World Drug Report.
