

Dr. Gabriel Andreuccetti (M.Sc, Ph.D) is the Coordinator at the Center of Excellence for Illicit Drug Supply Reduction in Brazil, a partnership between UNODC, UNDP and the Brazilian National Secretariat for Drug Policies. He has been working as a scientist over the last 15 years in different research projects in the addiction field, combining his experience in

Forensic Toxicology and Epidemiology of alcohol and other drug use. He has a B.Sc. in Biological Sciences and a M.Sc. in Epidemiology from the University of Sao Paulo, Brazil. He has completed his Ph.D. in Epidemiology at the Department of Preventive Medicine from the University of Sao Paulo Medical School in Brazil, and he also was a Postdoctoral Fellow at the Public Health School, University of California at Berkeley, USA. He has published more than 30 peer-reviewed papers in the field of drugs and helped establish one of the first research groups on injury and substance use in Brazil.

Short description of the focus of the presentation:

The confiscation of seized assets in the context of drug trafficking must be understood as a mean to compensate society. Through better management of seized assets, it is possible to increase the public budget, which in turn will support public preventive drug policies. In this regard, this presentation will address a study on the asset management model in Brazil, analysing the flow of seized assets since the confiscation, through disposal, and finally the sale of these assets, coordinated by the National Secretariat for Drug Policies from the Ministry of Justice and Public Security in Brazil.
