The CTP is fully relevant at the strategic level of the UN. As more MS request its support, the programme will have to ensure MS relevance is continuously identified, assessed, and addressed. The programme delivers well in meeting the technical and structural requirements for coherent cooperation and collaboration between the implementing partners and has been identified as an excellent example of the ‘One-UN’ approach. The programme uses its resources in a broadly efficient manner and there are efficiency dividends from having CTPP staff embedded in UN and non-UN agencies alike. The effectiveness of the programme in making progress toward the establishment of PIUs is progressing well, even allowing for the challenges posed by Covid-19. The CTPP sustainability strategy relies heavily on creating a functioning PIU which then relies on the beneficiary MS adhering to the PIU resource commitments it makes when partnering with the CTPP. Impact has not been properly addressed in the intervention logic of the CTPP, however, in making progress toward establishing a PIU, some positive signs of impact have been identified, such as improved networking between national agencies. Human rights and gender (HRGE) have been nested in programme activities yet how to fully integrate gender into CTPP work remains a challenge.
LESSONS LEARNED

There has been relatively little engagement with Civil Society Organisations (CSOs), private sector or academia in this programme. Properly capturing those perspectives within programme design and activities will provide opportunities to benefit from this wider pool of knowledge and expertise, especially from a human rights and gender viewpoint. Efficiency stems not only from programme engagement with other stakeholders, but also from within programme itself from its own functions. Reducing over burdensome reporting regimes improves efficiency. A fully developed theory of change helps ensure the implementation of programme activities have a direction and purpose that is consistent with the programme’s objectives and intended impact. Limited capacity to provide guidance and support on HRGE considerations within programming activity creates an environment where it can slip down the priority list. HRGE should be ‘designed in’ from the start of any programme.

GOOD PRACTICES

The CTTP programme is highly relevant. The alignment of the programme interventions with the country’s needs makes it easier to engage government and local stakeholders. Due to its relevance the programme has been effective at maintaining a coherent environment necessary for the implementation of programme activities and outputs. The roadmaps have been established as per the requirements of specific member states making implementation of programme outputs and activities easier to achieve. A comprehensive / One-UN approach used for this programme has been effective for inter and intra- agency collaboration and has provided positive advocacy for the UN. The availability of an ‘off-the-shelf’ software solution along with technical support has proven to be an attractive component of the programme.

RECOMMENDATIONS

1. Theory of Change: Develop a full Theory of Change (ToC).
2. Efficiency: Examine two key aspects to improve efficiency namely, i) reporting mechanisms, and ii) processes and procedures between UNOCT PMT Budapest and UNOCT Executive Office (EO) New York.
4. Gender mainstreaming collaboration: Improve the understanding regarding effective gender mainstreaming and equity, by reviewing the policies and guidelines of UNOCT and Implementing Partners, together with their gender focal points, as needed, to identify approaches and practices that could be applied to the programme.
5. Human rights capacity building: Increase focus on human rights, scenario-based capacity building through a standalone module within the current CTTP training approach.
6. Donors: Convene a meeting with all donors to discuss mutual issues such as priorities, funding, and reporting requirements.

METHODOLOGY

This joint evaluation was managed by UNOCT’s Evaluation and Compliance Unit, and UNODC’s Independent Evaluation Section. The evaluation followed a mixed-methods as well as gender-responsive evaluation methodology, in line with United Nations Evaluation Group (UNEG) and UNODC norms and standards, guidelines, and requirements. The evaluation used purposive sampling. A preliminary desk review was undertaken, and an Inception Report created to identify information gaps and design data collection instruments to fill those gaps. Semi-structured, telephone interviews were conducted, a Most Significant Change (MSC) narration was completed, activities were observed, (five-day training course, and PMT meeting), country comparisons undertaken, and an online survey distributed.
